Description

Pulmonary function tests (PFTs), also known as lung function tests, include a variety of tests to check how well the lungs are working. This policy describes the medical necessity guidelines for pulmonary function testing.

Policy/Criteria

- I. It is the policy of health plans affiliated with Centene Corporation® that pulmonary function testing (PFT) is **medically necessary** for members/enrollees aged three years and above when meeting the criteria for one of the following tests:
 - A. Spirometry, one of the following⁴:
 1. Detection of the presence or absence of lung dysfunction suggested by history or clinically significant physical signs and symptoms;
 2. Detection of the presence or absence of lung dysfunction suggested by other abnormal diagnostic tests (e.g., radiography, arterial blood gas analysis);
 3. Quantifying the severity of known lung disease;
 4. Assessment of the change in lung function over time;
 5. Assessment of the change in lung function following administration of or a change in therapy;
 6. Assessment of the risk for surgical procedures known to affect lung function;
 7. Post-bronchodilator spirometry studies when at least one of the following conditions is present and documented in the medical record:
 - a. Signs or symptoms consistent with bronchospasm;
 - b. Spirometry without bronchodilator is abnormal;
 - c. Reversibility or nonreversibility of bronchospasm has not been demonstrated;Note: Repeat studies are covered only with clinically significant change, necessitating adjustment/augmentation of therapy with appropriate documentation.
 - B. Lung volume tests for any of the following⁴:
 1. Evaluation of the type and degree of pulmonary dysfunction;
 2. Evaluation of dyspnea, cough, and other symptoms;
 3. Early detection of lung dysfunction;
 4. Assessment and follow-up of response to therapy;
 5. Preoperative evaluation;
 6. Tracking of pulmonary disease progression;
 7. Assessment of the effectiveness of therapy for pulmonary conditions;
 8. Preoperative and postoperative evaluations for lung volume reduction surgery (LVRS);Note: Repeat testing of total lung volume is not typically clinically necessary.
 - C. Diffusion capacity of the lungs for carbon monoxide (DLCO) tests for any of the following⁴:

1. Evaluation and follow up of parenchymal lung diseases associated with dusts or drug reactions or sarcoidosis;
2. Evaluation and follow up of emphysema and cystic fibrosis;
3. Differentiating between chronic bronchitis, emphysema, and asthma in members/enrollees with obstructive patterns;
4. Evaluation of the pulmonary involvement in systemic diseases (e.g., rheumatoid arthritis, systemic lupus);
5. Assisting in the evaluation of some types of cardiovascular disease (e.g., primary pulmonary hypertension, pulmonary edema, acute or recurrent thromboembolism);
6. Prediction of arterial desaturation during exercise in chronic obstructive pulmonary disease (COPD);
7. Evaluation and quantification of the disability associated with interstitial lung disease;
8. Evaluation of the effects of chemotherapy agents or other drugs known to induce pulmonary dysfunction;
9. Evaluation of hemorrhagic disorders;
- D. Lung compliance studies when all other PFTs give equivocal results or results which must be confirmed by additional lung compliance testing⁴;
- E. Pulmonary studies during exercise testing, one of the following^{4,5}:
 1. Simple pulmonary stress testing for one of the following:
 - a. Measuring the degree of hypoxemia or desaturation that occurs with exertion;
 - b. Optimizing titration of supplemental oxygen for the correction of hypoxemia;
 2. Complex pulmonary studies during exercise testing protocol for any of the following:
 - a. Distinguishing between cardiac and pulmonary causes for dyspnea;
 - b. Determination of the need for and dose of ambulatory oxygen;
 - c. Assisting in developing a safe exercise prescription for members/enrollees with cardiovascular or pulmonary disease;
 - d. Predicting the morbidity of lung resection;
 - e. Titration of optimal settings in selected patients who have physiologic pacemakers.

Background

Pulmonary function tests (PFTs) are indicated for evaluation of respiratory symptoms such as cough, wheezing, dyspnea, and chest pain, response to bronchodilator therapy, effect of workplace exposure to dust or chemicals, and pulmonary disability. They can also be used to assess severity and progression of lung diseases, such as asthma, and chronic obstructive lung disease.² PFTs can measure obstructive, restrictive, and diffusion defects and respiratory muscle function as well as aid in preoperative assessment or monitoring of disease progression and prognosis.³ Normal test values are calculated based on age, height and gender.¹

Common terminology pertaining to PFTs includes the following²:

- Vital capacity (VC): The maximum volume of air exhaled after maximum inspiration. VC can be measured during forced exhalation (FVC) or slow exhalation (SVC);
- Functional residual capacity (FRC): The volume of air remaining in chest at the end of a tidal volume breath;
- Residual volume (RV): The volume of air remaining in chest after maximal exhalation.

- Expiratory reserve volume (ERV): The volume of air exhaled from end-tidal volume (FRC) to point of maximal exhalation (RV), thus RV plus ERV equals FRC;
- Inspiratory capacity (IC): The maximum inspiration from end-tidal volume (FRC) to total lung capacity;
- Inspiratory reserve volume (IRV): The volume of air inhaled during tidal breathing from end-inhalation to total lung capacity;
- Total lung capacity (TLC): volume of air in lungs at end of maximal inspiration (usually calculated by RV plus VC or FRC plus IC).

The main types of pulmonary function tests include spirometry, spirometry before and after bronchodilator, lung volumes, and diffusing capacity. Additional tests include flow-volume loops, lung compliance tests, and pulmonary studies during exercise testing.^{4,5}

Spirometry

Spirometry is the most readily available pulmonary function test. It measures lung volumes by measuring the amount of exhaled air at specific time points during forceful and complete exhalation and is a key determinant when diagnosing and monitoring asthma, COPD, chronic cough, neuromuscular diseases affecting breathing, and other causes of airflow obstruction.²

Spirometry can be performed before and after bronchodilator use to determine the degree of reversibility of airflow restriction. Administration of albuterol by a metered-dose inhaler is indicated if baseline spirometry demonstrates airway obstruction or if asthma or COPD is suspected.²

Lung volume tests

Lung volume tests are more precise than spirometry as they are able to measure the total amount of air in the lungs, including the air that remains at the end of a normal breath.¹ Body plethysmography is considered the gold standard for lung volumes measurements, particularly in the setting of significant airflow obstruction. Additional testing methods include helium dilution, nitrogen washout, and measurements based on chest imaging.²

Diffusion capacity tests

A diffusing capacity of the lungs for carbon monoxide (DLCO) test measures how easily oxygen enters the bloodstream.¹ This test is useful in the evaluation of restrictive and obstructive lung disease, as well as pulmonary vascular disease.²

Flow volume loops

A flow-volume loop is a plot of inspiratory and expiratory flow (on the Y-axis) against volume (on the X-axis) during the performance of maximally forced inspiratory and expiratory maneuvers.⁸ This test is useful in the presence of stridor and when evaluating unexplained dyspnea. Airway obstruction located in the pharynx, larynx, or trachea can be difficult to detect from standard FVC maneuvers, and changes in the contour of the test's loop can aid in the diagnosis and localization of airway obstruction.^{2,8}

Pulmonary studies during exercise testing

CLINICAL POLICY

Pulmonary Function Testing

Pulmonary studies during exercise testing help to evaluate the causes of shortness of breath. Testing is often conducted in a pulmonary function laboratory and does not require the resources needed for a maximal cardiopulmonary exercise test. Three commonly used tests are the six-minute walk test, the incremental shuttle walk test, and the endurance shuttle walk test.²

Coding Implications

CPT Codes ⁶⁻⁷	Description
94010	Spirometry, including graphic record, total and timed vital capacity, expiratory flow rate measurement(s), with or without maximal voluntary ventilation
94060	Bronchodilation responsiveness, spirometry as in 94010, pre- and post-bronchodilator administration
94070	Bronchospasm provocation evaluation, multiple spirometric determinations as in 94010, with administration of agents (e.g., antigen[s], cold air, methacholine)
94150	Vital capacity, total (separate procedure)
94200	Maximum breathing capacity, maximal voluntary ventilation
94375	Respiratory flow volume loop
94450	Breathing response to hypoxia (hypoxia response curve)
94617	Exercise test for bronchospasm, including pre- and post-spirometry and pulse oximetry; with electrocardiographic recording(s)
94618	Pulmonary stress testing (e.g., 6-minute walk test) including measurement of heart rate, oximetry, and oxygen titration, when performed
94619	Exercise test for bronchospasm, including pre- and post-spirometry and pulse oximetry; without electrocardiographic recording(s)
94621	Cardiopulmonary exercise testing, including measurements of minute ventilation, CO ₂ production, O ₂ uptake, and electrocardiographic recordings
94680	Oxygen uptake, expired gas analysis; rest and exercise, direct, simple
94681	Oxygen uptake, expired gas analysis; including CO ₂ output, percentage oxygen extracted
94690	Oxygen uptake, expired gas analysis; rest, indirect (separate procedure)
94726	Plethysmography for determination of lung volumes and, when performed, airway resistance
94727	Gas dilution or washout for determination of lung volumes and, when performed, distribution of ventilation and closing volumes
94728	Airway resistance by oscillometry
+94729	Diffusing capacity (e.g., carbon monoxide, membrane)

Added to the medical necessity statement in I. that PFTs are medically necessary for members/enrollees 3 years of age and above. Removed demarcation of spirometry indications as diagnostic or for monitoring purposes. In B.2, noted that the indication also includes assessing for concurrent restrictive and obstructive disease. Minor rewording of other criteria with no clinical significance. Added multiple additional codes as medically necessary in ICD-10 Table 1. Added 96417-96419 and 96421 as applicable to ICD-10 Table 1. Changed order of ICD-10 Tables 2 and 3 so that Table 3 now applies to 94070. Removed codes duplicative with ICD-10 Table 1 in ICD-10 Table 2. Removed R06.83 in Table 2. Removed reference to “coverage” from all ICD-10 coding tables. Updated with additional references. Reviewed by multiple specialists.	06/22	06/22
Changed I28.88 to I28.8 in ICD-10 Table 1.	07/22	
Added the following codes to ICD-10 Table 1: B44.81, D86.81, I42.0-I42.8, J84.842, J84.843, M41.116, M41.117, M41.126, M41.127, M41.26, M41.27, Z48.21 and Z48.280. Added LCA A56784 to references accordingly.	10/22

Important Reminder

This clinical policy has been developed by appropriately experienced and licensed health care professionals based on a review and consideration of currently available generally accepted standards of medical practice; peer-reviewed medical literature; government agency/program approval status; evidence-based guidelines and positions of leading national health professional organizations; views of physicians practicing in relevant clinical areas affected by this clinical policy; and other available clinical information. The Health Plan makes no representations and accepts no liability with respect to the content of any external information used or relied upon in developing this clinical policy. This clinical policy is consistent with standards of medical practice current at the time that this clinical policy was approved. “Health Plan” means a health plan that has adopted this clinical policy and that is operated or administered, in whole or in part, by Centene Management Company, LLC, or any of such health plan’s affiliates, as applicable.

The purpose of this clinical policy is to provide a guide to medical necessity, which is a component of the guidelines used to assist in making coverage decisions and administering benefits. It does not constitute a contract or guarantee regarding payment or results. Coverage decisions and the administration of benefits are subject to all terms, conditions, exclusions and limitations of the coverage documents (e.g., evidence of coverage, certificate of coverage, policy, contract of insurance, etc.), as well as to state and federal requirements and applicable Health Plan-level administrative policies and procedures.

CLINICAL POLICY

Pulmonary Function Testing

This clinical policy is effective as of the date determined by the Health Plan. The date of posting may not be the effective date of this clinical policy. This clinical policy may be subject to applicable legal and regulatory requirements relating to provider notification. If there is a discrepancy between the effective date of this clinical policy and any applicable legal or regulatory requirement, the requirements of law and regulation shall govern. The Health Plan retains the right to change, amend or withdraw this clinical policy, and additional clinical policies may be developed and adopted as needed, at any time.

This clinical policy does not constitute medical advice, medical treatment or medical care. It is not intended to dictate to providers how to practice medicine. Providers are expected to exercise professional medical judgment in providing the most appropriate care, and are solely responsible for the medical advice and treatment of members/enrollees. This clinical policy is not intended to recommend treatment for members/enrollees. Members/enrollees should consult with their treating physician in connection with diagnosis and treatment decisions.

Providers referred to in this clinical policy are independent contractors who exercise independent judgment and over whom the Health Plan has no control or right of control. Providers are not agents or employees of the Health Plan.

This clinical policy is the property of the Health Plan. Unauthorized copying, use, and distribution of this clinical policy or any information contained herein are strictly prohibited. Providers, members/enrollees and their representatives are bound to the terms and conditions expressed herein through the terms of their contracts. Where no such contract exists, providers, members/enrollees and their representatives agree to be bound by such terms and conditions by providing services to members/enrollees and/or submitting claims for payment for such services.

Note: For Medicaid members/enrollees, when state Medicaid coverage provisions conflict with the coverage provisions in this clinical policy, state Medicaid coverage provisions take precedence. Please refer to the state Medicaid manual for any coverage provisions pertaining to this clinical policy.

Note: For Medicare members/enrollees, to ensure consistency with the Medicare National Coverage Determinations (NCD) and Local Coverage Determinations (LCD), all applicable NCDs, LCDs, and Medicare Coverage Articles should be reviewed prior to applying the criteria set forth in this clinical policy. Refer to the CMS website at <http://www.cms.gov> for additional information.
