## Clinical Policy: Inotuzumab Ozogamicin (Besponsa)

Reference Number: PA.CP.PHAR.359

Effective Date: 09/2017

Last Review Date: 10/2022

[Revision Log](#)

### Description

Inotuzumab ozogamicin (Besponsa™) is a CD22-directed antibody-drug conjugate.

### FDA Approved Indication(s)

Besponsa is indicated for the treatment of adults with relapsed or refractory B-cell precursor acute lymphoblastic leukemia (ALL).

### Policy/Criteria

Provider must submit documentation (which may include office chart notes and lab results) supporting that member has met all approval criteria.

It is the policy of PA Health & Wellness that Besponsa is **medically necessary** when the following criteria are met:

#### I. Initial Approval Criteria

##### A. B-Cell Precursor Acute Lymphoblastic Leukemia (must meet all):

1. Diagnosis of B-cell ALL;
2. Prescribed by or in consultation with an oncologist or hematologist;
3. B-cell ALL is CD22 positive;
4. Disease meets one of the following (a or b):
  - a. Philadelphia chromosome-negative, and one of the following (i or ii):
    - i. Disease is relapsed or refractory;
    - ii. Besponsa is prescribed as induction therapy, and either age  $\geq 65$  years or member has substantial comorbidities;
  - b. Philadelphia chromosome-positive and disease is relapsed or refractory;
5. If age  $\leq 18$  years, one of the following (a or b):
  - a. Besponsa is prescribed as single-agent therapy;
  - b. For relapsed/refractory Ph-negative B-ALL Besponsa in combination with mini-hyper-CVD (mini-hyperfractionated cyclophosphamide, vincristine, and dexamethasone) regimen;
6. Besponsa is prescribed for no more than 6 cycles total;
7. Request meets one of the following (a or b):
  - a. Dose does not exceed  $1.8 \text{ mg/m}^2$  per cycle ( $0.8 \text{ mg/m}^2$  on Day 1 and  $0.5 \text{ mg/m}^2$  on Days 8 and 15);
  - b. Dose is supported by practice guidelines or peer-reviewed literature for the relevant off-label use (*prescriber must submit supporting evidence*).

**Approval duration: 6 months Up to 6 cycles total**

##### B. Other diagnoses/indications

1. Refer to PA.CP.PHAR.53 if diagnosis is NOT specifically listed under section III (Diagnoses/Indications for which coverage is NOT authorized).

## II. Continued Therapy

### A. B-Cell Precursor Acute Lymphoblastic Leukemia (must meet all):

1. Currently receiving medication via PA Health & Wellness benefit or member has met all initial approval criteria or the Continuity of Care Policy (PA.LTSS.PHAR.01) applies;
2. Member is responding positively to therapy;
3. Member has not received  $\geq 6$  cycles of Besponsa;
4. If request is for a dose increase, request meets one of the following (a or b):
  - a. New dose does not exceed  $1.8 \text{ mg/m}^2$  per cycle ( $0.8 \text{ mg/m}^2$  on Day 1 and  $0.5 \text{ mg/m}^2$  on Days 8 and 15);
  - b. New dose is supported by practice guidelines or peer-reviewed literature for the relevant off-label use (*prescriber must submit supporting evidence*).

**Approval duration: Up to 6 cycles total**

### B. Other diagnoses/indications (must meet 1 or 2):

1. Currently receiving medication via PA Health & Wellness benefit or member has met all initial approval criteria or the Continuity of Care Policy (PA.LTSS.PHAR.01) applies;

**Approval duration: Duration of request or 6 months (whichever is less); or**

2. Refer to PA.CP.PHAR.53 if diagnosis is NOT specifically listed under section III (Diagnoses/Indications for which coverage is NOT authorized).

## III. Diagnoses/Indications for which coverage is NOT authorized:

- A. Non-FDA approved indications, which are not addressed in this policy, unless there is sufficient documentation of efficacy and safety according to the off label use policy – PA.CP.PHAR.53 or evidence of coverage documents.

## IV. Appendices/General Information

### Appendix A: Abbreviation/Acronym Key

ALL: acute lymphoblastic leukemia

CR: complete remission

CRi: complete remission with

incomplete hematologic recovery

FDA: Food and Drug Administration

HSCT: hematopoietic stem cell transplant

### Appendix B: Therapeutic Alternatives

Not Applicable Appendix C: Contraindications/Boxed Warnings

- Contraindication(s): none reported
- Boxed warning(s): hepatotoxicity, including hepatic venoocclusive disease; increased risk of post-HSCT non-relapse mortality

## V. Dosage and Administration

Indication	Dosing Regimen	Maximum Dose
B-cell ALL	If proceeding to hematopoietic stem cell transplant (HSCT):	$1.8 \text{ mg/m}^2$ per cycle

Indication	Dosing Regimen	Maximum Dose
	<ul style="list-style-type: none"> <li>The recommended duration is 2 cycles. A third cycle may be considered for those patients who do not achieve a complete remission* (CR) or complete remission with incomplete hematologic recovery* (CRi) and minimal residual disease negativity after 2 cycles.</li> </ul> <p>If not proceeding to HSCT:</p> <ul style="list-style-type: none"> <li>Additional cycles of treatment, up to a maximum of 6 cycles, may be administered.</li> </ul> <p><b>Cycle details:</b> Pre-medication is recommended before each dose.</p> <ul style="list-style-type: none"> <li>For the first cycle: 1.8 mg/m<sup>2</sup> per cycle, administered as 3 divided doses on Day 1 (0.8 mg/m<sup>2</sup>), Day 8 (0.5 mg/m<sup>2</sup>), and Day 15 (0.5 mg/m<sup>2</sup>). Cycle 1 is 3 weeks in duration, but may be extended to 4 weeks if the patient achieves CR or CRi, and/or to allow recovery from toxicity.</li> <li>For subsequent cycles: <ul style="list-style-type: none"> <li>In patients who achieve a CR or CRi, 1.5 mg/m<sup>2</sup> per cycle, administered as 3 divided doses on Day 1 (0.5 mg/m<sup>2</sup>), Day 8 (0.5 mg/m<sup>2</sup>), and Day 15 (0.5 mg/m<sup>2</sup>). Subsequent cycles are 4 weeks in duration. OR</li> <li>In patients who do not achieve a CR or CRi, 1.8 mg/m<sup>2</sup> per cycle given as 3 divided doses on Day 1 (0.8 mg/m<sup>2</sup>), Day 8 (0.5 mg/m<sup>2</sup>), and Day 15 (0.5 mg/m<sup>2</sup>). Subsequent cycles are 4 weeks in duration.</li> <li>Patients who do not achieve a CR or CRi within 3 cycles should discontinue treatment.</li> </ul> </li> </ul>	(0.8 mg/m <sup>2</sup> per dose)

\*CR (complete remission) is defined as < 5% blasts in the bone marrow and the absence of peripheral blood leukemic blasts, full recovery of peripheral blood counts (platelets  $\geq 100 \times 10^9/L$  and absolute neutrophil counts [ANC]  $\geq 1 \times 10^9/L$ ) and resolution of any extramedullary disease.

\*CRi (complete remission with incomplete hematologic recovery) is defined as < 5% blasts in the bone marrow and the absence of peripheral blood leukemic blasts, incomplete recovery of peripheral blood counts (platelets  $< 100 \times 10^9/L$  and/or ANC  $< 1 \times 10^9/L$ ) and resolution of any extramedullary disease.

## VI. Product Availability

Single-dose vial, powder for reconstitution: 0.9 mg
