Description
This policy describes the medical necessity requirements for the removal of Essure®, a permanent birth control method that involves the bilateral placement of coils into the fallopian tubes which results in the development of scar tissue and occlusion of the fallopian tubes.

Policy/Criteria
I. It is the policy of Pennsylvania Health and Wellness® that the removal of Essure is **medically necessary** when meeting all of the following:
- A. Member is having symptoms related to the device such as abdominal/pelvic pain or heavy/irregular menses not related to other gynecologic pathologies, device migration, or nickel allergy/hypersensitivity;
- B. Performed by a gynecologist or surgeon experienced in removing the device;
- C. Radiologic evaluation to determine the device location;
- D. One of the following procedures:
  1. Hysteroscopy if ≤ 7 weeks post-placement;
  2. Laparoscopy or laparotomy for one of the following:
     a. Linear salpingotomy, salpingostomy, or salpingo-oophorectomy;
     b. Cornual resection and repair;
     c. Removal of devices that have migrated from the fallopian tubes.

Background
Essure is a form of permanent birth control that can be performed in an office setting and does not require incisions or general anesthesia. It involves the placement of spring-like devices into the proximal section of each fallopian tube via hysteroscopy. Over the next three months, scar tissue forms around the Essure coils facilitating insert retention and pregnancy prevention. The build-up of tissue creates a barrier to block sperm from reaching the eggs, preventing pregnancy.

Over the past several years, a growing number of adverse events have been report to the FDA (Food and Drug Administration) associated with the use of Essure. Frequently reported adverse events include pain/abdominal pain, menstrual irregularities, headache, fatigue, device migration, allergy/hypersensitivity reaction, and weight fluctuations. Because of these reported adverse events, there has been an increase in the number of women seeking removal of the Essure device.

Coding Implications
This clinical policy references Current Procedural Terminology (CPT®). CPT® is a registered trademark of the American Medical Association. All CPT codes and descriptions are copyrighted 2017, American Medical Association. All rights reserved. CPT codes and CPT descriptions are from the current manuals and those included herein are not intended to be all-inclusive and are included for informational purposes only. Codes referenced in this clinical policy are for informational purposes only. Inclusion or exclusion of any codes does not guarantee coverage. Providers should reference the most up-to-date sources of professional coding guidance prior to the submission of claims for reimbursement of covered services.

CPT® Codes	Description
58555	Hysteroscopy, diagnostic (separate procedure)
58562	Hysteroscopy, surgical; with removal of impacted foreign body
58579	Unlisted hysteroscopy procedure, uterus
58661	Laparoscopy, surgical; with removal of adnexal structures (partial or total oophorectomy and/or salpingectomy)
58673	Laparoscopy, surgical; with salpingostomy (salpingoneostomy)
58700	Salpingectomy, complete or partial, unilateral or bilateral (separate procedure)
58770	Salpingostomy (salpingoneostomy)

ICD-10-CM Diagnosis Codes that Support Coverage Criteria

ICD-10-CM Code	Description
N92.0-N92.6	Excessive, frequent and irregular menstruation
R10.0-R10.84	Abdominal and pelvic pain
R21	Rash and other nonspecific skin erruption
T56.891	Toxic effect of other metals, accidental (unintentional)
T83.428*	Displacement of other prosthetic devices, implants and grafts of genital tract

*7th digit required
