Last Review Date: 03/18

Coding Implications
Revision Log

Description
Non-myeloablative allogeneic stem cell transplants (also known as “mini-transplants”, “mini-allograft”, “transplant lite” or “reduced intensity conditioning transplant”) is a therapeutic option for an array of malignant and nonmalignant hematologic diseases. This approach can circumvent the need for high dose conditioning regimens that are associated with organ toxicity and mortality. Non-myeloablative allogeneic stem cell transplants use a reduced intensity protocol and is considered an established alternative. This policy describes the medical necessity requirements for these transplants.

Policy/Criteria
I. It is the policy of Pennsylvania Health and Wellness® (PHW) that non-myeloablative allogeneic transplants is medically necessary for members who meet all of the following criteria:
   A. Candidate for conventional high dose chemotherapy (myeloablative) and allogeneic stem cell transplantation for any of the following diagnoses:
      1. Acute lymphoblastic leukemia
      2. Acute myelogenous leukemia
      3. Aplastic anemia
      4. Paroxysmal nocturnal hemoglobinuria
      5. Chronic lymphoblastic leukemia
      6. Chronic myelogenous leukemia
      7. Congenital immunodeficiency syndromes: molecular remissions induced by Gleevec
      8. Hodgkin’s disease: primary refractory or relapsed, including those who have relapsed having an autologous bone marrow transplant
      9. Non-Hodgkin’s disease, any of the following:
         a. Primary refractory or relapsed, including those who have relapsed having an autologous bone marrow transplant
         b. Follicular lymphomas
         c. Mantle cell lymphoma
         d. Diffuse large cell lymphoma
      10. Multiple myeloma if responsive to primary treatment
      11. Myelodysplastic syndromes.
      12. Myelofibrosis
      13. Neuroblastoma, High Risk
      14. Sickle Cell Anemia
      15. Thalassemia Major
   B. Unsuitable for conventional high-dose myeloablative allografting because of untreatable significant dysfunction of another major organ system and/or severe comorbidities, including, but not limited to, any of the following:
      1. Bilirubin > 2 mg/dL
      2. Hemostasis: international normalized ratio (INR) > 1.6 (unless on oral anticoagulants)
Non-Myeloablative Allogeneic Stem Cell Transplants

3. Cardiac function: multigated acquisition scan (MUGA) or echocardiogram with ejection fraction (EF) < 45%
4. Pulmonary function
   a. Forced expiratory volume in 1 second (FEV1) ≤ 50% of predicted value; or
   b. Diffusing capacity of the lung for carbon monoxide (DLCO) ≤ 50% of predicted value
5. Performance scale index
   a. Karnofsky or Lansky score < 70%; or
   b. Eastern Cooperative Oncology Group (ECOG) performance score ≤ 2

C. Does not have ANY of the following absolute contraindications:
   1. Chronic infection with highly virulent and/or resistant microbes that are poorly controlled pre-transplant;
   2. Current non-adherence to medical therapy or a history of repeated or prolonged episodes of non-adherence to medical therapy that are perceived to increase the risk of non-adherence after transplantation;
   3. Psychiatric or psychological condition associated with the inability to cooperate or comply with medical therapy;
   4. Absence of an adequate or reliable social support system;
   5. Substance abuse or dependence (including tobacco and alcohol) without convincing evidence of risk reduction behaviors, such as meaningful and/or long-term participation in therapy for substance abuse and/or dependence. Serial blood and urine testing may be used to verify abstinence from substances that are of concern.

II. It is the policy of PHW that non-myeloablative allogeneic transplants are experimental/investigational for the following indications:
A. Treatment for other conditions, including but not limited to the following:
   1. Astrocytomas and gliomas
   2. Breast cancer
   3. Dermatomyositis
   4. Diffuse large cell B-cell Non-Hodgkin’s disease
   5. Ewing sarcoma
   6. Germ cell Tumors
   7. Idiopathic thrombocytopenic purpura
   8. Juvenile rheumatoid arthritis
   9. Lupus erythematosus
   10. Medulloblastoma
   11. Melanoma
   12. Multiple sclerosis
   13. Osteosarcoma
   14. Ovarian epithelia and mixed epithelia/germ cell cancers
   15. Polycythemia vera
   16. Polymyositis
   17. Ovarian germ cell Tumors
   18. Primitive Neuroectodermal Tumors (PNET), including medulloblastoma and ependymoma
Non-Myeloablative Allogeneic Stem Cell Transplants

19. Renal cell carcinoma
20. Retinoblastoma
21. Rhabdomyosarcoma
22. Severe systemic rheumatoid arthritis, Adult and Juvenile
23. Sarcoma
24. Systemic lupus erythematosus
25. Systemic sclerosis
26. Testicular Cancer
27. Wilms tumor

Background
Allogeneic stem cell transplant (AlloBMT) has been used as a treatment for cancer and diseases of the blood system for many years. For this treatment, stem cells are collected from either related or unrelated donors. During the conditioning phase, high doses of chemotherapy (HDC), with or without radiation therapy, are used to eradicate the disease and this is followed by infusion of an allogeneic stem cell transplantation to rescue bone marrow and restore normal immune function. Major limitations of this technique are the associations with serious side effects and high mortality. All stem cell transplants (SCTs) preparative regimens have the potential for extensive toxicity. Loss of appetite and energy, alopecia, and nausea/vomiting are very frequent and add to poor physical and emotional tolerance of the transplant procedure. In addition, mucositis, diarrhea, and transient pancytopenia are inevitable side effects of most preparative regimens, and these complications are synergistic in dramatically increasing the risk of bacterial and fungal infections. Any decrease in toxicity, without concomitant loss of efficacy, would be desirable.

Myeloablative means that the treatment kills (ablates) the myeloid stem cells in the bone marrow, the cells that produce new blood cells. Several less intense conditioning regimens have been developed recently and rely more on immuno-suppression than cytotoxic effects to permit engraftment of donor cells. These regimens are collectively termed non-myeloablative. Studies have shown that donor allogeneic stem cells can engraft in recipients using less-intensive conditioning regimens that are sufficiently immunosuppressive to permit graft-host tolerance. This manifests as a stable mixed donor-host hematopoietic chimerism, a term which means the coexistence of donor and recipient cells. Once chimerism has developed, a further infusion of donor leukocytes may be given to eradicate malignant cells by inducing a graft vs. tumor effect. Non-myeloablative allogeneic transplants, also referred to as “mini-transplant” or “transplant lite”, are thought to be potentially as effective as conventional HDC followed by an allogeneic stem cell transplantation, but with decreased morbidity and mortality related to the less intense non-myeloablative chemotherapy conditioning regimen. Consequently, for patients with malignancies who are eligible for conventional HDC/AlloBMT, conditioning with milder, non-myeloablative regimens represents a variation of an established procedure.

Coding Implications

</table>
| 02/18 CPC | 03/18 PHW | Clarified in I. that policy statements applied to RIC and non-myeloablative regimens. Removed criteria in I.A. that patient be a candidate for conventional allogeneic transplantation. Added paroxysmal nocturnal hemoglobinuria as an indication. Changed chronic lymphoblastic leukemia to chronic lymphocytic leukemia. Added criteria to multiple myeloma requiring that it be responsive to primary treatment. For myelodysplastic syndromes, restricted indication to adults. Added myelofibrosis as an indication. Edited comorbidity in criteria I.B. to include the listed comorbidities as well as others not mentioned – “including but not limited to.” Removed contraindication in II.A. of ineligibility for conventional high-dose chemotherapy/myeloablation, as well as restriction for members under 3 years of age.
