Clinical Policy: Intestinal and Multivisceral Transplant
Reference Number: PA.CP.MP.58
Effective Date: 01/18
Last Review Date: 09/18

Description
Medical necessity criteria for the review of intestinal and multivisceral transplant requests

Policy/Criteria
It is the policy of Pennsylvania Health & Wellness® (PHW) that any of the intestinal and/or multivisceral transplantation procedures listed in I are medically necessary for pediatric and adult members to restore function in those with irreversible intestinal failure when meeting the criteria in section II:

I. Transplantation Procedures
   A. Isolated intestinal transplantation is indicated for members who have only isolated intestinal failure and no liver disease.
   B. Combined intestinal and liver transplant is indicated in those with intestinal failure and end stage liver disease.
   C. Multivisceral transplant is indicated in those with intestinal failure and the presence of neuropathy or extensive mesenteric thrombosis.

II. Procedure Criteria: Members must have one of the indications in A and none of the contraindications in B:
   A. Indications, any one of the following:
      1. Failure of total parenteral nutrition (TPN) as indicated by one of the following:
         a. Impending or overt liver failure due to TPN, indicated by elevated serum bilirubin and/or liver enzymes, splenomegaly, thrombocytopenia, gastro-esophageal varices, coagulopathy, peristomal bleeding, or hepatic fibrosis/cirrhosis;
         b. Thrombosis of ≥ 2 central veins, including jugular, subclavian, and femoral veins;
         c. Two or more episodes of systemic sepsis due to line infection, per year, or one episode of septic shock, acute respiratory distress syndrome, and/or line related fungemia;
         d. Frequent episodes of dehydration despite IV fluid supplementation;
         e. Other complications leading to loss of vascular access;
      2. High risk of death if transplant is not performed;
      3. Severe short bowel syndrome (gastrostomy, duodenostomy, residual small bowel <10 cm in infants and <20 cm in adults);
      4. Frequent hospitalizations for complications directly related to intestinal failure;
      5. Significant hepatic cirrhosis associated with diffuse post-mesenteric thrombosis;
   B. Does not have ANY of the following contraindications:
      1. Malignancy in the past two years, except for non-melanoma localized skin cancer that has been treated appropriately;
      2. Untreatable significant dysfunction of another major organ system, unless combined organ transplantation can be performed;
      3. Presence of other GI diseases;
Clinical Policy
Intestinal and Multivisceral Transplant

4. Acute medical instability, including, but not limited to, acute sepsis or myocardial infarction;
5. Uncorrectable bleeding diathesis;
6. Chronic infection with highly virulent and/or resistant microbes that are poorly controlled pre-transplant;
7. Current non-adherence to medical therapy or a history of repeated or prolonged episodes of non-adherence to medical therapy that are perceived to increase the risk of non-adherence after transplantation;
8. Psychiatric or psychological condition associated with the inability to cooperate or comply with medical therapy;
9. Absence of an adequate or reliable social support system;
10. Severely limited functional status with poor rehabilitation potential;
11. Substance abuse or dependence (including tobacco and alcohol) without convincing evidence of risk reduction behaviors, such as meaningful and/or long-term participation in therapy for substance abuse and/or dependence. Serial blood and urine testing may be used to verify abstinence from substances of concern.

Background
Intestinal transplantation is a therapeutic option for patients with intestinal failure. Intestinal failure is the loss of absorptive capacity of the small bowel secondary to severe primary gastrointestinal disease or surgically induced short bowel syndrome (SBS). The normal small intestine length varies widely, ranging from 3 to 8 meters. SBS occurs when there is approximately < 200 cm of small bowel remaining.

Multi-visceral transplantation includes the stomach, duodenum, pancreas, liver, and small intestine. A modified version excludes the liver if the recipient’s liver is normal. A kidney transplant is occasionally included if the recipient has end-stage renal disease.

Common indications for intestinal transplantation in children include:
- Small bowel atresia
- Gastrochisis
- Aganglionosis (Hirschsprung’s disease)
- Infections such as necrotizing enterocolitis and mesenteric ischemia
- Intestinal pseudo-obstruction
- Microvillus inclusion disease
- Short gut syndrome
- Trauma
- Crohn’s disease
- Midgut volvulus
- Massive resection secondary to tumor

Common indications for intestinal transplantation in adults include:
- Short gut syndrome
- Mesenteric ischemia following thrombosis, embolism, volvulus, or trauma
- Crohn’s disease
- Small bowel tumors
- Small bowel secretory disorders
- Tumors of mesenteric root and retroperitoneum
- Trauma
- Volvulus
- Pseudo-obstruction
- Radiation enteritis
Guideline Recommendations
The British Society of Gastroenterology (2006) recommends: patients with SBS, including irreversible intestinal failure, expected to die prematurely on TPN, should be referred for consideration of short bowel transplant where appropriate.

The American Society of Transplantation (AST, 2001) issued a position paper on indications for pediatric intestinal transplantation. The AST recommends intestinal transplantation only for TPN-dependent children with intestinal failure who have or are likely to develop life-threatening TPN-related complications such as liver disease, recurrent sepsis, and threatened loss of central venous access. The AST stated that intestinal transplantation should not be performed solely because of continued dependence on TPN.

Coding Implications
This clinical policy references Current Procedural Terminology (CPT®). CPT® is a registered trademark of the American Medical Association. All CPT codes and descriptions are copyrighted 2018, American Medical Association. All rights reserved. CPT codes and CPT descriptions are from the current manuals and those included herein are not intended to be all-inclusive and are included for informational purposes only. Codes referenced in this clinical policy are for informational purposes only. Inclusion or exclusion of any codes does not guarantee coverage. Providers should reference the most up-to-date sources of professional coding guidance prior to the submission of claims for reimbursement of covered services.
