

## Clinical Policy: Asfotase Alfa (Strensiq)

Reference Number: PA.CP.PHAR.328

Effective Date: 01/18

Last Review Date:

[Coding Implications](#)

[Revision Log](#)

### Description

The intent of the criteria is to ensure that patients follow selection elements established by Pennsylvania Health and Wellness<sup>®</sup> clinical policy for asfotase alfa (Strensiq<sup>™</sup>).

### Policy/Criteria

It is the policy of health plans affiliated with Pennsylvania Health and Wellness<sup>®</sup> that Strensiq is **medically necessary** when the following criteria are met:

#### I. Initial Approval Criteria

##### A. Perinatal/Infantile- and Juvenile-Onset Hypophosphatasia (must meet all):

1. Diagnosis of perinatal/infantile- or juvenile-onset hypophosphatasia (HPP) as evidenced by all of the following (a, b and c):
  - a. Age of onset is < 18 years;
  - b. Presence of one of the following laboratory indices (i or ii):
    - i. Mutation in the ALPL gene encoding for tissue non-specific alkaline phosphatase (TNSALP)\*;
    - ii. Serum alkaline phosphatase (ALP) below the age-adjusted normal range and either of the following (a or b):
      - a) Plasma pyridoxal 5'-phosphate (PLP; main circulating form of vitamin B6) above the upper limit of normal (ULN);
      - b) Urinary phosphoethanolamine (PEA) above the ULN;
  - c. History of one of the following HPP clinical manifestations:
    - i. Vitamin B6-dependent seizures;
    - ii. Failure to thrive or growth failure/short stature;
    - iii. Nephrocalcinosis with hypercalcemia/hypercalcuria;
    - iv. Skeletal abnormalities and associated impairments (any of the following):
      - a) Craniosynostosis (premature fusion of one or more cranial sutures) with increased intracranial pressure;
      - b) Rachitic chest deformity (costochondral junction enlargement seen in advanced rickets) with associated respiratory compromise;
      - c) Limb deformity with delayed walking or gait abnormality;
      - d) Compromised exercise capacity due to rickets and muscle weakness;
      - e) Low bone mineral density for age with unexplained fractures;
      - f) Alveolar bone loss with premature loss of deciduous (primary) teeth;
2. Prescribed dose does not exceed the following (a or b):
  - a. Perinatal/infantile-onset HPP: 9 mg/kg in split doses per week;
  - b. Juvenile-onset HPP: 6 mg/kg in split doses per week.

\*TNSALP is an ALP isoenzyme; a functional mutation in the gene (ALPL) encoding for TNSALP results in low TNSALP activity (as evidenced by a low serum ALP level) and increased levels of TNSALP substrates (PLP and PEA).

**Approval duration: 3 months**

**B. Other diagnoses/indications:** Refer to CP.PHAR.57 - Global Biopharm Policy.

## II. Continued Approval

**A. Perinatal/Infantile- and Juvenile-Onset Hypophosphatasia** (must meet all):

1. Currently receiving medication via Pennsylvania Health and Wellness benefit or member has previously met all initial approval criteria or the Continuity of Care policy (PA.LTSS.PHAR.01) applies;;
2. Member is responding positively to therapy;
3. Prescribed dose does not exceed the following (a or b):
  - a. Perinatal/infantile-onset HPP: 9 mg/kg in split doses per week;
  - b. Juvenile-onset HPP: 6 mg/kg in split doses per week.

**Approval duration: 6 months**

**B. Other diagnoses/indications** (must meet 1 or 2):

1. Currently receiving medication via Pennsylvania Health and Wellness benefit and documentation supports positive response to therapy or the Continuity of Care policy (PA.LTSS.PHAR.01) applies;; or
2. Refer to CP.PHAR.57 - Global Biopharm Policy.

## Background

### *Description/Mechanism of Action:*

Strensiq (asfotase alfa) is a soluble glycoprotein composed of two identical polypeptide chains. Each chain consists of the catalytic domain of human tissue non-specific alkaline phosphatase (TNSALP), the human immunoglobulin G1 Fc domain and a deca-aspartate peptide used as a bone targeting domain. Strensiq is a TNSALP produced by recombinant DNA technology in a Chinese hamster ovary cell line. TNSALP is a metallo-enzyme that catalyzes the hydrolysis of phosphomonoesters with release of inorganic phosphate and alcohol. Asfotase alfa has a specific activity of 620 to 1250 units/mg. One activity unit is defined as the amount of asfotase alfa required to form 1  $\mu\text{mol}$  of p-nitrophenol from pNPP per minute at 37°C.

Hypophosphatasia (HPP) is caused by a deficiency in TNSALP enzyme activity, which leads to elevations in several TNSALP substrates, including inorganic pyrophosphate (PPi). Elevated extracellular levels of PPi block hydroxyapatite crystal growth which inhibits bone mineralization and causes an accumulation of unmineralized bone matrix which manifests as rickets and bone deformation in infants and children and as osteomalacia (softening of bones) once growth plates close, along with muscle weakness. Replacement of the TNSALP enzyme upon Strensiq treatment reduces the enzyme substrate levels.

### *Formulations:*

Strensiq (asfotase alfa) is a sterile, preservative-free, aqueous solution for subcutaneous administration. Strensiq is supplied in glass single-use vials containing asfotase alfa in the following strengths:

- 18 mg/0.45 mL (0.45 mL)

**CLINICAL POLICY**  
**Asfotase Alfa**

- 28 mg/0.7 mL (0.7 mL)
- 40 mg/mL (1 mL)
- 80 mg/0.8 mL (0.8 mL)

*FDA Approved Indications:*

Strensiq (asfotase alfa) is a bone-targeted human recombinant tissue nonspecific alkaline phosphatase (TNSALP) fusion protein (enzyme replacement therapy), available in a subcutaneous injectable formulation, and indicated for:

- Treatment of patients with perinatal/infantile- and juvenile-onset hypophosphatasia (HPP).

**Appendices**

**Appendix A: Abbreviation Key**

HPP: hypophosphatasia

PLP: pyridoxal 5'-phosphate

PEA: phosphoethanolamine

pNPP: para-nitrophenyl phosphate

PPi: inorganic pyrophosphate

TNSALP: tissue non-specific alkaline phosphatase

ULN: upper limit of normal

ALP: alkaline phosphatase

**Coding Implications**

Codes referenced in this clinical policy are for informational purposes only. Inclusion or exclusion of any codes does not guarantee coverage. Providers should reference the most up-to-date sources of professional coding guidance prior to the submission of claims for reimbursement of covered services.
