

### Clinical Policy: Sebelipase Alfa (Kanuma)

Reference Number: PA.CP.PHAR.159

Effective Date: 01/2018 Last Review Date: 04/2023

**Revision Log** 

### **Description**

Sebelipase alfa (Kanuma®) is a hydrolytic lysosomal cholesteryl ester and triacylglycerol-specific enzyme.

### FDA Approved Indication(s)

Kanuma is indicated for the treatment of patients with a diagnosis of Lysosomal Acid Lipase (LAL) deficiency.

### Policy/Criteria

Provider must submit documentation (such as office chart notes, lab results or other clinical information) supporting that member has met all approval criteria.

It is the policy of PA Health & Wellness that Kanuma is **medically necessary** when the following criteria are met:

### I. Initial Approval Criteria

- A. Lysosomal Acid Lipase Deficiency (must meet all):
  - 1. Diagnosis of lysosomal acid lipase (LAL) deficiency confirmed by one of the following:
    - a. Enzyme assay demonstrating a deficiency of LAL activity;
    - b. Lipase A lysosomal acid type (LIPA) gene mutation;
  - 2. Age  $\geq 1$  month;
  - 3. Documentation of member's current weight (in kg);
  - 4. Request meets one of the following (a or b):
    - a. Dose does not exceed 3 mg/kg every other week;
    - b. For members with rapidly progressive disease presenting within the first 6 months of life: Dose does not exceed any of the following (i or ii):
      - i. 3 mg/kg per week;
      - ii. 5 mg/kg per week, upon documentation of suboptimal clinical response to 3 mg/kg per week\*.
        - \* Suboptimal clinical response is defined as any of the following: poor growth, deteriorating biochemical markers, or persistent or worsening organomegaly

### **Approval duration: 6 months**

### **B. Other diagnoses/indications:** Refer to PA.CP.PMN.53

#### **II. Continued Approval**

- A. Lysosomal Acid Lipase Deficiency (must meet all):
  - 1. Currently receiving medication via PA Health & Wellness benefit or member has previously met all initial approval criteria; or the Continuity of Care policy (PA.LTSS.PHAR.01) applies;

### CENTENE® Corporation

## CLINICAL POLICY Sebelipase Alfa

- 2. Member is responding positively to therapy as evidenced by documentation of clinical response which may include, but is not limited to:
  - a. For members with rapidly progressive disease presenting within first 6 months of life: continued survival;
  - b. For all other members: decrease in low-density lipoprotein cholesterol [LDL-c], non-high-density lipoprotein cholesterol [non-HDL-c], or triglycerides; increase in HDL-c; normalization of alanine aminotransferase [ALT] or aspartate aminotransferase [AST]; reduction in hepatic fat content, steatosis, or liver volume:
- 3. Documentation of member's current weight (in kg);
- 4. If request is for a dose increase, new dose does not exceed any of the following (a or b):
  - a. 3 mg/kg every other week;
  - b. For members with rapidly progressive disease presenting within the first 6 months of life: Dose does not exceed any of the following (i or ii):
    - i. 3 mg/kg per week;
    - ii. 5 mg/kg per week, upon documentation of suboptimal clinical response to 3 mg/kg per week\*..
      - \* Suboptimal clinical response is defined as any of the following: poor growth, deteriorating biochemical markers, or persistent or worsening organomegaly

LAL: lysosomal acid lipase

LDL-c: low-density lipoprotein cholesterol

LIPA: lipase A – lysosomal acid type

### **Approval duration: 12 months**

- **B. Other diagnoses/indications** (must meet 1 or 2):
  - 1. Currently receiving medication via PA Health & Wellness benefit and documentation supports positive response to therapy; or the Continuity of Care policy (PA.LTSS.PHAR.01) applies; or
  - 2. Refer to PA.CP.PMN.53

#### III. Appendices/General Information

Appendix A: Abbreviation/Acronym Key

ALT: alanine aminotransferase

AST: aspartate aminotransferase

FDA: Food and Drug Administration

HDL-c: non-high-density lipoprotein

cholesterol

Appendix B: Therapeutic Alternatives

Not applicable

Appendix C: Contraindications/Boxed Warnings

- Contraindication(s): none reported.
- Boxed warning(s): none reported.

## CLINICAL POLICY Sebelipase Alfa

Appendix D: Measures of Therapeutic Response

LAL normally causes the breakdown of lipid particles, including LDL-c. A lack of LAL results in accumulation of cholesteryl esters and triglycerides. Therefore, LDL-c, non-HDL-c, triglycerides, and HDL-c are clinical parameters that can indicate therapeutic response to Kanuma. In clinical trials, there were initial increases in LDL-c and triglycerides within the first 2-4 weeks of treatment; however, this was followed by a decrease to below pretreatment values within 8 weeks of treatment.

In addition, the lipid accumulation seen in LAL deficiency can occur in multiple organs, including the liver. This results in increased liver fat content and progression of liver disease, including fibrosis and cirrhosis. In clinical trials, patients receiving Kanuma had normalization of ALT and AST levels, reduction in hepatic fat content and steatosis (defined as the absolute decrease of  $\geq 5\%$  from baseline in assessment of hepatic fat content)\*, and decrease in baseline liver volume\* when compared to patients receiving placebo. As such, improvement in these areas may also indicate positive response to Kanuma.

IV. Dosage and Administration

<b>Indication</b>	Dosing Regimen	Maximum Dose
LAL deficiency: rapidly progressive disease presenting	1 mg/kg IV once weekly	5 mg/kg/week
within first 6 months of life	For patients with a suboptimal clinical response, increase the dosage to 3 mg/kg once weekly.  For patients with continued suboptimal clinical response, further increase the dosage to 5 mg/kg once weekly.  * Suboptimal clinical response is defined as any of the following: poor growth, deteriorating biochemical markers, or persistent or worsening organomegaly	
LAL deficiency	1 mg/kg IV every other week  For patients with a suboptimal clinical response, increase the dosage to 3 mg/kg once every other week.  * Suboptimal clinical response is defined as any of the following: poor growth, deteriorating biochemical markers, or persistent or worsening organomegaly	3 mg/kg every other week

<sup>\*</sup>Not statistically significant

# CLINICAL POLICY Sebelipase Alfa

### V. Product Availability

Single-use vial: 20 mg/10 mL

### **Coding Implications**

Codes referenced in this clinical policy are for informational purposes only. Inclusion or exclusion of any codes does not guarantee coverage. Providers should reference the most up-to-date sources of professional coding guidance prior to the submission of claims for reimbursement of covered services.

HCPCS Codes	Description
J2840	Injection, sebelipase alfa, 1 mg

Reviews, Revisions, and Approvals	Date	Approv al Date
2Q 2018 annual review: Added age restriction and max dose criteria. Added examples of what may constitute positive response to therapy; references reviewed and updated.	02/2018	
2Q 2019 annual review: references reviewed and updated.		
2Q 2020 annual review: references reviewed and updated.		
2Q 2021 annual review: references reviewed and updated.		
2Q 2022 annual review: no significant changes; added requirement for documentation of member's current weight for dose calculation purposes; updated max recommended dose for members with rapidly progressive disease presenting within the first 6 months of life per the Prescribing Information and clarified documentation requirements for max dose requests for this population; references reviewed and updated.		
2Q 2023 annual review: no significant changes; added definition of "suboptimal clinical response" for determining the need for further dose increases; references reviewed and updated.
